

Practice Question(20-25min)

For Quiz 3 & 4, for lab mid too
You don't have to submit anything(but u can, form link below).
Just solve and have fun!

Mario is in a coin-collecting level. You will input how many **jumps** Mario takes(practice 3 jumps, 2 is easy). In each jump, you'll input how many **coins** he collects. (2 digit inputs)

At the end, your code will:

🍄 Show the **total coins collected** (Should work for 2-3 digit outputs)

🍄 Show the **average coins per jump**

🍄 If the total is over 50, show "LEVEL UP!"

🍄 If it's under 10, show "TRY HARDER!"

🍄 If it's between 30(excluded) and 40(included), show "Hey! Good job!"

Sample Input 1:

How many jumps? → 3

Coins in jump 1? → 05

Coins in jump 2? → 20

Coins in jump 3? → 15

Sample Output 1:

Total coins = 40

Average coins per jump = 13

Hey! Good job!

Sample Input 2:

How many jumps? → 3

Coins in jump 1? → 35

Coins in jump 2? → 50

Coins in jump 3? → 30

Sample Output 2:

Total coins = 115

Average coins per jump = 38

LEVEL UP!

(I know the example is unrealistic, sshhh)
